

Production Process

The **production process** is a term that refers to the transformation (conversion) of **inputs** (labor, financial resources, raw material, non-material resources, infrastructure and other) to the **outputs** that have some value. In other words, it is a conversion of resources into products (goods or services). The production process has many synonyms in different sectors, it is a generic term in, for example, manufacturing process, chemical process, service delivery and other.

Schematically, the production process is described below.
