How to Printer Driver Installation

How to Install Driver Download for Windows? First, go to the HP website, click the Support & Drivers link, and select the Drivers & Software navigation link. Now click the "Print and Multifunction" option in the Product Category area and enter your product number in the given field or select the "Printer" option in the navigation menu. Make sure you select your printer name carefully from the list of products. Now click on "Download drivers and software" in the navigation menu. Carefully review the available driver options. Select the desired option and click on the Download button. Finally click on "Save" and select the "Browse" option to select a storage location for your file. Then click "Save" to download the printer driver. Install the HP printer driver First, find the downloaded driver folder that you saved in the steps above. Double click on this file to start the installation process. If asked for permission to start the installation process, click the OK option. Then click "Next" to accept the default installation location and start the installation wizard. In this step, select either the recommended or the custom installation. The recommended version of the installation installs all of the components that a user needs. During the custom installation, as the name suggests, the user can choose the options they want. Then click "Install" and "Finish" once the process is complete. In that case, you have to contact the HP printer support to install a CD version. For more details, you can call us at: 1-877-323-1333 .
