HP Envy Printers setup

How to connect HP Envy Printer setup to the wifi router Turn on the printer and the wireless router. Make sure the router has the WPS button. Go to the printer's touchscreen and open the LAN setup wizard. This will find the wireless router. Now the user has to select the WLAN router, which then asks for the WPA key (ie the password). Your printer will now be connected to your wireless router within a few seconds. Here is the easiest, most reliable way to get HP Envy wireless printer connected to Windows. First, the user must ensure that the printer is turned on and connected to the wireless router as described in the section above. Now the user needs to install the printer driver and software on the computer. This can be done in two ways. Use the installation CD that came with the printer or go to the HP website (www.123.hp.com/setup) and download the driver directly from there. Then go to the control panel and select the option "Devices and Printers". This will take you to a new window. Click the Add a printer link in the upper right corner. For more details, you can call us at: 1-877-323-1333 .
