The emergence of Path of Exile 4.0 will not be earlier than one year

POECurrency.com provide Path of Exile Trade Currency services, offering the safest POE Trade, the cheapest price, 7/24 online service! Fast Delivery!

Path of Exile regularly accepts changes to the league, and these changes bring a lot of news to the game and bring a lot of appeals. However, the most prominent emotions always cause significant updates, which reverses the Path of Exile. One of them is the 4.0 patch, which will be a real revolution in this product. But I think that the mechanism of using POE Currency Buy will not change much.

Initially, Grinding Gear Games Studio assumed that it would offer Path of Exile 4.0 players in the second half of 2020. Developers apologize, just saying they won't finish on time. They need more time to get this update to their plans. Therefore, it will appear no earlier than a year, and even if the creator needs it, it may also be later.

At the same time, the GGG team confirmed that this would not change the Path of Exile release plan. It means that future news alliances (every 13 weeks) will continue to emerge. There will even be a new version that blocks the wait time for Update 4.0. So don't worry about the future of "Path of Exile" because the game will always develop.

During the ExileCon in November, we will receive a playable demo of Exile Path 4.0 and a more significant update announcement. Before this, players were free to play games and purchase the POE Currency, as these will not change much before the Path of Exile 4.0.
