Are There Types of Impacted Wisdom Tooth?

Emergency Dentist Houston disclosed there are four basic types of impactions. We will discuss the types of wisdom tooth impaction in these four factors in further depth in the following section.

1. Mesial Impactions:

The most general type of wisdom tooth impaction is mesial impaction. The tooth is partially erupted and inclined towards the front of the mouth with a mesial impaction. Due to partial eruption, mesial impactions have known as angular impactions. The **affordable dentist near me** will closely examine the tooth before determining whether or not to extract the tooth.

2. Vertical Impactions:

A tooth that is vertical or nearly vertical in a position is known as vertical impaction. **Best cosmetic dentist Houston** disclosed this type of impaction might not require extraction because it is at the proper place for eruption. However, wisdom tooth extraction may be necessary if the tooth is pressing against the teeth next to it or if the tooth's roots are under too much strain.

3. Horizontal Impactions:

A horizontal tooth, or parallel to the gum line, is referred to as a horizontal impaction. The majority of horizontal impaction situations are entirely affected. The horizontal wisdom tooth continually applies force to the molar next to it. It is the most severely painful type of impaction. As a result, wisdom teeth affected horizontally require extraction as soon as feasible. Otherwise, the wisdom tooth will continue to press against the neighboring molar. It can cause severe damage to the other teeth.

4. Distal Impactions:

Distal wisdom tooth impactions are the most uncommon of all wisdom tooth impactions. Distal impacted tooth contact angled, similar to teeth with a mesial impaction—teeth with a distal impaction shift towards the back of the mouth. Unlike teeth with a mesial impaction, the distal tooth can be partially or fully impacted. The erupted angle of the tooth will finalize whether your partial or complete impacted wisdom tooth requires extraction.
