## Invisalign; How is Effective To Fix Orthodontic Issues?

*Invisalign is a special invisible tray designed for patients who have some orthodontic issues like crooked teeth, bite issues, misaligned teeth, and it eventually shifts your teeth in their proper place.*

Invisalign is a special invisible tray designed for patients who have some orthodontic issues like crooked teeth, bite issues, misaligned teeth, and it eventually shifts your teeth in their proper place. You won't have to face all of the inconvenience of traditional braces as there is nothing to be attached to your teeth and there are no tightening wires at all. The **Invisalign Dentist Near Me** provides you with different aligners every two weeks until you have completed the cycle of the treatment.

When you choose an **Affordable Invisalign Dentist**, you will never experience uncomfortable situations as nobody won't be able to notice the braces because they are invisible aligners. It can be the best option for adults and teens as they are the most conscious about their overall physical appearance.

□

Your dentist may prescribe a dental X-ray and take an impression of your teeth to design the actual treatment plan for you. Then, he/she will discuss the plan with you. When your aligners are ready that are made of BPA-free plastic, he/she will place them on the top of your teeth. You will have to wear them for around twenty-two hours a day for the best and effective results. You can remove them whenever you want like during meals or at bedtime.

### Which Orthodontic Issues are treated with Invisalign?

The following issues can be fixed by Invisalign such as:

#### Crooked Teeth

If you are wishing to have a straighter smile, Invisalign is a better option or choice.

#### Overbite

When the upper teeth close too far in front of the bottom teeth that means you have an overbite issue making chewing and biting difficult for you. **Invisalign Braces** can fix this problem effectively.

### **Underbite**

When bottom teeth are in front of the upper teeth which means you are suffering from an underbite creating difficulties with speech. **Invisalign in Houston Tx** can help fix such types of issues. If the condition is extreme, your dentist may use braces and Invisalign in combination.

### **Crossbite**

When the tooth is either closer to the cheek or to the tongue rather than outside, it can cause your teeth to chip or may cause gums to recede. **Invisalign Houston Tx** can correct mispositioned teeth into the right place to fix crossbite.

□

### **Gaps in Teeth**

If you have space between your teeth, your smile will become ugly. Also, the wider space can cause problems as the food you eat may be stuck between teeth and gums leading to pain and gum disease. Invisalign can fill the gaps making your mouth healthier and providing you a beautiful and pleasant smile.

### **Open Bite**

When a person's upper teeth and lower teeth don't meet correctly that means he/she is suffering from the open bite. **Houston Invisalign dentist** can help you by providing Invisalign treatment to move the teeth in the correct position.

### **Crowded Teeth**

When there is not much space in the jaw to choose all the teeth, they can be twisted or overlapped, this condition is referred to as crowding. The reduced space amid teeth lets the food stick leading to tartar buildup which may cause tooth decay and gum disease.

If you are experiencing any one of these mentioned orthodontic issues, you can rely on Invisalign to fix the issues.
