There are 3 types of dental veneers that you need to understand before getting treatment. In this article, we have mentioned all the useful information about veneers that you must know so make sure to read the article till the end.

There are no people that can understand the exact meaning of dental veneers. We have found from **Cosmetic Dentistry** that veneers are a cosmetic dental procedure designed to enhance the appearance of your teeth. These veneers are generally placed over on the front teeth and also on the sides to show off the smile.

There are 3 types of dental veneers that you need to understand before getting treatment. In this article, we have mentioned all the useful information about veneers that you must know so make sure to read the article till the end.

What are dental veneers?

As we mentioned above the dental veneers near me are thin coverings placed by your dentist over the front teeth. Veneers exactly look like your natural teeth that are used to correct multiple dental issues including discoloration of teeth, stained teeth that are not able to be whitened by the whitening kit.

How much should dental veneers cost?

The cost of dental veneers generally varies from \$400 to \$2500 for each tooth. The cost may depend from dentist to dentist, composite veneers are low on cost and then porcelain veneers cost from \$400 to \$1600 each tooth. Porcelain veneers are the most expensive veneers because their cost ranges from \$930 to \$3000 per tooth.
