## How to install Linksys Velop?

*Setting up a Linksys Velop router is easy with the help of Linksys Velop app. Here in the following sections of this blog, you can go through the Linksys Velop Setup instructions. But go through the list of the things you will need for setting up a Linksys Velop Wi-Fi system.*

After completing Linksys Velop login, it's time to complete its configuration process. You need to follow the steps which are given below to begin the **Linksys Velop setup**.

- » Go to 'setup a new product' and under it tap on 'setup a new Velop system' option.
- » A page of terms and conditions will appear. Read the page and click on 'I Agree' option.
- » Now, setup will search for nearby devices and choose a **Linksys Velop system** from the list.
- » Plug in a 'Node' and click on the 'Next' option.
- » Now, you need to connect the Velop node to the modem.
- » Follow the on-screen prompts to enter your username and password and tap on 'Create Account' to finish the creating account.
- » Create a 'Wireless name' and 'network key' for your Linksys Velop system.
- » Enter the name for your Velop node and click 'Ok'.
- » The Velop node is successfully added. You need to click 'Add another node' if you want to add more.

With the the Linksys Velop setup instructions, the configuration is now completed.
