TP-Link Upgrade Firmware Router – Tplinkwifi.Net : 192.168.1.1

Usually, TP-link wireless routers do not update their firmware by themselves automatically. They require downloading the firmware version file from the official website and then access the browser interface via tplinkwifi.net login and upgrade the firmware manually. Importance of upgrading the firmware of TP-link wireless router:- Updating the TP-link wireless router firmware resolves any technical glitches faced with the previous firmware version. In addition, it updates the new add-on features to the TP-link router which help to improve the functioning and performance of the router.
